

134. An EL display device according to claim 133, wherein said organic resin is selected from the group consisting of polyimide, polyimideamide, polyamide, acryl and epoxy.

135. An EL display device according to claim 133, wherein said first insulating layer has a planarized surface.

136. An EL display device according to claim 133, wherein said EL display device is incorporated into an electric apparatus selected from the group consisting of a portable information terminal, a head mount display, a portable telephone, a video camera and a projector.

137. An EL display device comprising:
a switching element comprising at least one thin film transistor formed over a substrate;
a first insulating layer comprising organic resin for providing a flattened surface, formed over said switching element;
a second insulating layer comprising DLC formed over said first insulating layer;
a pixel electrode formed over said second insulating layer, said pixel electrode electrically connected to said thin film transistor; and
a light-emitting layer formed over said second insulating layer.

138. An EL display device according to claim 137, wherein said organic resin is selected from the group consisting of polyimide, polyimideamide, polyamide, acryl and epoxy.

139. An EL display device according to claim 137, wherein said first insulating layer has a planarized surface.

140. An EL display device according to claim 137, wherein said EL display device is incorporated into an electric apparatus selected from the group consisting of a portable information terminal, a head mount display, a portable telephone, a video camera and a projector.--
